Abstract

The vascular flora of the Kennedy Space Center (KSC) area was first studied in the 1970's (Sweet 1976, Poppleton et al. 1977), and the list was revised in 1990 (Schmalzer and Hinkle 1990). Nomenclatural and taxonomic changes as well as additional collections required a new revision of this list. The revised list includes 1024 taxa of which 803 are native and 221 are introduced. This appears to be a substantial proportion of the regional flora. Fifty taxa are endemic or nearly endemic to Florida, a level of endemism that appears high for the east coast of Florida. Of the 221 introduced plants, twenty-six are Category I invasive exotics and fifteen are Category II invasive exotics. Thirty-eight taxa are listed as threatened, endangered, or of special concern on state lists. For some of these taxa, populations on KSC appear to be important for their regional and global survival. The bryophyte flora of the KSC area include 23 mosses and 20 liverworts and hornworts (Whittier and Miller 1976). The lichen flora is currently unknown.

Acknowledgments

This study was conducted under NASA contract NAS10-02001. Earlier work was conducted under contracts NAS10-10285, NAS10-11624, and NAS10-12180. Trade names and commercial enterprises or products are mentioned only for information. No endorsement by NASA is implied by their use.

Introduction

The vascular flora of an area is a basic component of its biological diversity and an important consideration for environmental planning and impact assessment. In this report, we provide an updated and revised floristic list for the Kennedy Space Center area. We discuss those species listed as threatened or endangered under state or federal laws or regulations.

Floristic Lists

The first vascular floristic list for Kennedy Space Center (KSC) was prepared by botanists from the University of Central Florida (UCF) (Sweet 1976, Poppleton et al. 1977). It was based on collections primarily from northern Merritt Island (from Banana Creek to Haulover Canal) but also included plants from "excursions to the southern point of the Cape (Sebastian Inlet)" (Sweet 1976). The list published in the *Florida Scientist* included "all of coastal Brevard County east of the Indian River, and that portion of Volusia County included in the recently created Canaveral National Seashore" (Poppleton et al. 1977). Neither list corresponded exactly to the political boundaries of KSC.

In 1990, we revised the floristic list (Schmalzer and Hinkle 1990) based on additional vegetation and floristic studies (e.g., Breininger and Schmalzer 1990, Schmalzer and Hinkle 1987, Schmalzer et al. 1991) and new manuals and references treating all or part of the central Florida flora (Cronquist 1980, Godfrey and Wooten 1979, 1981; Wunderlin 1982, Wunderlin et al. 1985, 1988; Lellinger 1985).

Since then several manuals treating all or part of the vascular flora of Florida have appeared (Isely 1990, Flora of North America Editorial Committee 1993, 1997,

2000; Wunderlin 1998, Wunderlin and Hansen 2000). Additional vegetation and floristic studies have been conducted (Johnson et al. 1990, Schmalzer and Hinkle 1992, Johnson 1993, Chafin et al. 1996, Schmalzer and Oddy 1995, Schmalzer et al. 1999, 2002; Schmalzer and Adrian 2001). Therefore, a new revision of the KSC floristic list is required.

Bryophytes of the KSC area are known from the work of Whittier and Miller (1976). No subsequent additions or changes to this list are known, but it is included here so that available floristic information is centralized.

Threatened and Endangered Plants

The environmental impact statement for KSC (NASA 1979) provided the first list of threatened and endangered plants for the site; 11 taxa (*Acrostichum aureum*, *Annona glabra*, *Avicennia germinans*, *Asclepias curtissii*, *Chrysophyllum oliviforme*, *Drosera intermedia*, *Ophioglossum palmatum*, *Peperomia obtusifolia*, *Rhizophora mangle*, *Tournefortia gnaphalodes*, *Zamia integrifolia*) were listed. Poppleton (1981) provided information on 12 taxa (*Asclepias curtissii*, *Calamovilfa curtissii*, *Cereus erioiphorus* var. *fragrans*, *Chrysophyllum oliviforme*, *Hymenocallis latifolia*, *Lechea cernua*, *Ophioglossum palmatum*, *Persea borbonia* var. *humilis*, *Rhynchosia cinerea*, *Verbena maritima*, *Verbena tampensis*, *Zamia umbrosa*) then proposed for federal listing under the Endangered Species Act and two taxa (*Avicennia germinans*, *Rhizophora mangle*) of special interest in Florida (Ward 1978). Schmalzer and Hinkle (1985) included taxa listed by the state of Florida as well as those under review by the U.S. Fish and Wildlife Service; this list contained 60 taxa. In 1990, 73 taxa in the KSC flora were listed by state or federal agencies (Schmalzer and Hinkle 1990). As information on the

population status and threats to rare plants accumulates, agencies revise their lists of species of concern by adding taxa not previously listed, removing taxa shown to be more common than previously thought, and changing categories. Florida state lists have changed significantly in recent years (Coile 1996, 1998, 2000; Marois 1997). In addition, the U.S. Fish and Wildlife Service no longer maintains a list of Category 1 or 2 species; these categories previously indicated species that were under review but for which comprehensive data were lacking. Therefore, the list of threatened and endangered plants for KSC also required revision.

Methods

Floristic List

In 1990, the original floristic list of Sweet (1976) with additions and corrections of Poppleton et al. (1977) and Poppleton (1981) was compared to nomenclature of Wunderlin (1982), Wunderlin et al. (1985, 1988), Godfrey and Wooten (1979, 1981), Cronquist (1980), and Lellinger (1985). In addition, Hitchcock and Chase (1950), Bailey (1949), and Luer (1972) were consulted for certain groups. In the present revision, we compared the 1990 list (Schmalzer and Hinkle 1990) to Wunderlin (1998) and Wunderlin and Hansen (2000) and consulted treatments in the Flora of North America (Flora of North America Editorial Committee 1993, 1997, 2000). Nomenclature follows Wunderlin (1998) except in a few cases where the treatment in the Flora of North America was used. The nomenclature for some introduced plants not in Wunderlin (1998) follows Bailey (1949).

Examination of taxonomic monographs on all the groups represented in this flora was beyond the extent of the present effort. The specimens on which the original floristic list was based are housed at the UCF Herbarium (Sweet 1976, Poppleton et al. 1977); these specimens were not examined for this revision.

Some species were eliminated when it was clear they had been misidentified. More frequent were name changes or varieties or species now reduced to synonymy. We added additional species from fieldwork conducted since 1990.

Introduced and Endemic Plants

We examined the revised species list to determine which species were introduced (non-native) by comparing to comments in Wunderlin (1998) or to other manuals for species not listed there. We considered species to be native to the KSC area if they were native to central Florida. For introduced species, we examined the list of invasive species (Florida Exotic Pest Plant Council 2001) to determine if they were considered invasive. There are two categories maintained by the Florida Exotic Pest Plant Council. Category I includes invasive exotics that are altering native plant communities by displacing native species, changing community structures or ecological functions, or hybridizing with natives; Category II includes invasive exotics that have increased in abundance or frequency but have not yet altered Florida plant communities to the extent shown by Category I species.

We compared the revised floristic list to the list of vascular plants endemic to Florida of Muller et al. (1989) and to comments in Wunderlin (1998) to determine taxa endemic to Florida occurring in the KSC area. The categories used were those of Muller

et al. (1989): endemic to Florida, nearly endemic to Florida (range exceeds Florida's boundaries by < 10%), and not endemic.

Threatened and Endangered Plants

We compared the revised floristic list to the most recent lists of endangered and threatened plants of Florida (Marois 1997, Coile 2000). We also compiled available information on population status, habitat, and threats to existence for the listed taxa.

Spatial location information was available for certain species (Poppleton 1981, Johnson 1993, Chafin et al. 1996, Schmalzer unpublished). Some of these species are no longer considered rare enough to justify listing. For *Calamovilfa curtissii*, *Chamaesyce cumulicola*, *Glandularia* (=*Verbena*) *maritima*, *Glandularia* (=*Verbena*) *tampensis*, *Lantana depressa* var. *floridana*, *Lechea cernua*, *Lechea divaricata*, *Ophioglossum palmatum*, and *Persea borbonia* var. *humilis*, the plant locations were screen digitized on digital orthophoto quadrangles (DOQ) following the written field descriptions. Point features were added to a GIS coverage with genus, species, and rank information appended as attributes of the spatial locations.

Results

Floristic Lists

The revised vascular floristic list includes 1024 taxa of vascular plants (Appendix I). Of this flora, 221 taxa (21.6%) are introduced (Appendix II) and 803 are native. Twenty-six Category I invasive exotic plants and fifteen Category II invasive exotic plants occur (Appendix II). Fifty of the native taxa (6.2%) are endemic to Florida (Appendix III).

Bryophytes of the KSC area include 43 taxa, 23 mosses (Musci) and 20 liverworts and hornworts (Hepaticae and Anthocerotae) (Whittier and Miller 1976) (Appendix IV).

Threatened and Endangered Plants

Thirty-eight taxa (Table 1) are listed as threatened, endangered, or of special concern by the Florida Department of Agriculture and Consumer Services (Coile 2000), Florida Natural Areas Inventory (Marois 1997), or Florida Committee on Rare and Endangered Plants and Animals (Ward 1978). Endangered and threatened plants occur in various habitats including coastal dunes, coastal strand, scrub, pine flatwoods, hammocks, hardwood swamps, marshes, and mangrove swamps (Table 2). Species occur in various geographical locations throughout the area (Figure 1). Detailed information on locations and population status of these taxa is available only for those studied by Poppleton (1981), Johnson (1993), Chafin et al. (1996), or encountered in fieldwork related to long-term environmental monitoring and research at KSC.

Discussion

Floristic List

The KSC area supports a large vascular flora with elements of temperate distribution some of which approach the southern edge of their distribution and plants of subtropical distribution at or near the northern edge of their distribution. The number reported here (1024) is less than that (1045) reported in 1990 (Schmalzer and Hinkle 1990). The reduction is due to varieties or species reduced to synonymy by taxonomic revisions or to species excluded that were misidentified previously or appear to be out of range. Future work will result in other changes to the list. There have been additions

Table 1 (continued).

⁵ Florida Natural Areas Inventory (Marois 1997). FNAI assigns two ranks for each element. The global element rank is based on an element's worldwide status; the state element rank is based on the status of the element in Florida. Element ranks are based on factors including estimated number of element occurrences, estimated abundance, range, estimated adequately protected element occurrences, relative threat of destruction, and ecological fragility.

Global Element Rank:

G1 = Critically imperiled globally because of extreme rarity (5 or fewer occurrences or less than 1000 individuals) or because of extreme vulnerability to extinction due to some natural or man-made factor.

G2 = Imperiled globally because of rarity (6 to 20 occurrences or less than 3000 individuals) or because of vulnerability to extinction due to some biological or man-made factor.

G3 = Either very rare and local throughout its range (21-100 occurrences or less than 10,000 individuals), or found locally in a restricted range, or vulnerable to extinction because of other factors.

G4 = Apparently secure globally (may be rare in parts of range)

G5 = Demonstrably secure globally

G#T# = Rank of taxonomic subgroup such as subspecies or variety; numbers have same definition as above

State Element Rank:

Definitions parallel global element ranks: substitute "S" for "G" in global ranks, and "in state" for "globally" in global rank definitions.

Sensitive Plants on KSC, CCAFS, and CNS

Figure 1. Locations of selected sensitive species in the Kennedy Space Center area.

to the list as well. Some of these are native species (e.g., *Chamaesyce cumulicola*, *Lechea divaricata*) identified by new collections. Other additions (e.g., *Lygodium microphyllum*, *Senna pendula* var. *glabrata*) are invasive exotics whose ranges have expanded into the KSC area.

The KSC area flora exceeds that reported by Herwitz and Wunderlin (1990) for Cayo-Costa and Sanibel Islands in southwest Florida. The Merritt Island-Cape Canaveral barrier island complex has greater area than those islands. In addition, the northern portion of Merritt Island connects to the mainland and is not truly insular. Both of these factors would be expected to increase the size of the flora.

We term this flora as being of the KSC area deliberately. Not all these species may occur within the political boundaries of the Space Center or on adjacent federal properties (Cape Canaveral Air Force Station, Canaveral National Seashore). Location information from the herbarium specimens on which the list was based would have to be added to the database in order to determine occurrence within these boundaries.

There is a substantial introduced element to the flora. This appears to be related in part to past disturbance from agricultural activities, old home sites, and other landscape modifications. Only some of these species have become naturalized. Forty-one of these exotic species are considered invasive (26-Category I, 15 Category II). *Schinus terebinthifolius* (Brazilian pepper) is most prominent on the KSC landscape, but *Casuarina cf. equisetifolia* (Australian pine) and *Melaleuca quinquenervia* are locally abundant. These three species are among the most common and damaging invasive exotic plants in Florida (Schmitz et al. 1997). Although *Imperata cylindrica* (cogongrass) was recorded on KSC in the original floristic surveys, recently it has

spread into sites where it had not previously occurred. Cogongrass has the potential to invade upland communities and disrupt natural fire regimes (Lippincott 2000). Also of concern is the appearance of two new invasive species on the KSC landscape: *Lygodium microphyllum* (Old World climbing fern) and *Senna pendula* var. *glabrata* (valamuerto). Old world climbing fern is well established in south Florida and can cover native trees (Schmitz et al. 1997).

The number of taxa endemic or near endemic to Florida (50) reported here is higher than expected from Muller et al. (1989). The flora of the east coast of Florida is considered lower in endemics than the southern tip of the peninsula, the Central Ridge, or the lower Apalachicola River Basin (Muller et al. 1989); the data for KSC agree with the suggestion that coastal Florida be considered a fourth region of endemism within the state.

The lichen flora of KSC does not appear to have been studied. Two lichens are listed by the Florida Natural Areas Inventory (Marois 1997), and one (*Cladonia perforata*) is listed as endangered (Coile 2000). Brevard County, however, is not within the known range of this lichen. Thompson (1989) noted many rare lichens in an outlier of pine-oak scrub in Georgia. Frequent fire negatively impacts lichens and other cryptograms which recover slowly (Miller 1990).

Threatened and Endangered Plants

The number (38) of threatened and endangered plants has decreased from the last comprehensive list (Schmalzer and Hinkle 1990). The decreases are mainly from changes in state lists of species of concern. Some species on previous lists for KSC are no longer included. *Conradina grandiflora* occurs on the mainland of Brevard

County (Schmalzer et al. 1999) but years of fieldwork in scrub indicate that it is absent from Merritt Island and Cape Canaveral. *Cereus eriphorus* var. *fragrans* (now *Harrisia fragrans*) was reported from KSC (Poppleton 1981) based on a misidentification (Ann Johnson, FNAI, personal communication). *Cereus gracilis* var. *simpsonii* (now *Harrisia simpsonii*) once occurred at Turtle Mound (Norman 1976) but was eliminated by freezes (Norman and Hawley 1995) and now reaches its northern limits in south Brevard County (Johnson et al. 1990, Schmalzer et al. 1999). The status of some other species is uncertain. Poppleton (1981) reported that the one known population of *Tournefortia* (= *Argusia*) *gnaphalodes* was eliminated by a freeze in 1977.

Endangered and threatened plants occur in various habitats including coastal dunes, coastal strand, scrub, pine flatwoods, hammocks, hardwood swamps, marshes, and mangrove swamps. It is evident that hammocks and hardwood swamps have a high concentration of threatened and endangered plants, especially since these communities make up a relatively small proportion of the total vegetation of KSC (Provanch et al. 1986). Whittier and Miller (1976) noted the importance of hammocks to the bryophyte flora.

Detailed information on locations and population status of listed taxa is available only for those studied by Poppleton (1981), Johnson (1993), Chafin et al. (1996), or encountered in fieldwork related to long-term environmental monitoring and research at KSC. For most of these plants, there are insufficient data to determine how important KSC is to their regional or global survival. The protected areas within KSC and adjacent federal properties are important remaining habitat for native flora within the area. For *Calamovilfa curtissii* (Curtiss's reedgrass), KSC supports the largest populations in

public ownership and nearly the only confirmed populations on the east coast of Florida (Johnson and Blyth 1988, Johnson 1993); other known populations are in the Florida panhandle. Thus, proper management of areas containing this grass are important to its survival.

The major threat to the continued existence of most of these endangered and threatened plants throughout their range is habitat destruction. Several other threats exist. Many hammock species, especially epiphytes, are sensitive to fire. On the other hand, some scrub and flatwood species decline if fire is excluded for too long from those communities. Collection of horticulturally interesting plants such as orchids, bromeliads, and *Ophioglossum palmatum* (hand fern) is a problem in some parts of the state and could occur on KSC outside of the security zone. Rooting by feral hogs is a threat to terrestrial herbs, especially those of hammocks, but the extent of hog damage to these species locally is not known. Invasion of exotic plants, for example Brazilian pepper, displaces native species from hammocks and marshes.

Summary

1. The vascular flora of the Kennedy Space Center area is approximately 1024 species of which 803 are native and 221 are introduced. This appears to be a substantial fraction of the regional flora. Additional work is needed to incorporate location information on occurrences of these species into the database.
2. Fifty taxa in the KSC area vascular flora are endemic to Florida. Thirty-eight taxa are listed on state lists of threatened and endangered plants. For many of the listed taxa, current information is needed on location and population status. For

some taxa (e.g., *Calamovilfa curtissii*), populations within KSC appear important to their regional and global survival.

3. The bryophyte flora consists of 43 taxa, 23 mosses and 20 liverworts and hornworts. The lichen flora is currently unknown. Since rarity among lichens is now being recognized, consideration should be given to documenting the lichen flora.

Appendix II. Introduced plants in the Kennedy Space Center area flora.

Pteridophytes

Nephrolepidaceae

Nephrolepis cordifolia (L.) Presl EPPC-CI

Schizaeaceae

Lygodium microphyllum (Cav.) R. Br. EPPC-CI

Gymnosperms

Podocarpaceae

Podocarpus macrophyllus D. Don var. *maki* Endl.

Podocarpus nagi Makino

Zamiaceae

Cycas revoluta Thunb.

Angiosperms

Acanthaceae

Asystasia gangetica (L.) T. Anders EPPC-CII

Justicia brandegeana Wassh. & L.B. Smith

Odontonema tubiforme (Bertol.) Kuntze

Ruellia brittoniana Leonard ex Fern. EPPC-CI

Thunbergia alata Bojer ex Sims

Thunbergia fragrans Roxb.

Agavaceae

Agave decipiens Baker

Agave sisalana Perrine EPPC-CII

Sansevieria hyacinthoides (L.) Druce EPPC-CII

Yucca aloifolia L.

Amaranthaceae

Alternanthera philoxeroides (Mart.) Griesb. EPPC-CII

Amaranthus hybridus L.

Gomphrena serrata L.

Amaryllidaceae

Crinum bulbispermum (Burman) Milne-Redhead & Schweickt

Appendix II (continued)

Anacardiaceae

Mangifera indica L.
Schinus terebinthifolius Raddi EPPC-CI

Apiaceae

Cyclospermum leptophyllum (Pers.) Sprague ex Britton & Wilson

Apocynaceae

Allamanda cathartica L.
Carissa macrocarpa (Eckl.) A. DC.
Catharanthus roseus (L.) G. Don
Nerium oleander L.
Tabernaemontana divaricata (L.) R. Br.
Thevetia peruviana (Pers.) Schum.
Vinca minor L.

Araceae

Colocasia esculentum (L.) Schott EPPC-CI
Pistia stratiotes L. EPPC-CI
Syngonium podophyllum Schott EPPC-CI

Araliaceae

Tetrapanax papyriferus (Hook.) C. Koch

Arecaceae

Arecastrum ramanzoffianum Becc.
Cocos nucifera L.
Phoenix canariensis Chabaud
Phoenix dactylifera L.
Phoenix reclinata L. EPPC-CII
Phoenix sylvestris Roxb.
Washingtonia robusta Wendl.

Aristolochiaceae

Aristolochia littoralis Parodi

Asclepiadaceae

Morrenia odorata (Hook. & Arn.) Lindl.

Asteraceae

Emilia fosbergii Nichols.
Helianthus annuus L.
Pseudogynoxys chenopodioides Kunth
Sonchus asper (L.) Hill

Appendix II (continued)

Asteraceae

- Sonchus oleraceus* L.
Wedelia trilobata (L.) Hitchc. EPPC-CII
Youngia japonica (L.) DC.

Bignoniaceae

- Jacaranda acutifolia* Humb. & Bonpl.
Kigelia pinnata DC.
Podranea ricasoliana (Tanfani) Sprague
Pyrostegia venusta (Ker-Gaw.) Miers.
Spathodea campanulata Beauv.
Tecoma capensis (Thunb.) Lindl.
Tecoma stans (L.) Juss.

Brassicaceae

- Raphanus raphanistrum* L.

Buddlejaceae

- Buddleja madagascariensis* Lam.

Cactaceae

- Hylocereus undatus* (Haw.) Britton & Rose
Opuntia cochenillifera (L.) Mill.
Pereskia aculeata Mill.
Selenicereus pteranthus (Link & Otto) Britton & Rose

Cannaceae

- Canna x generalis* Bailey

Caprifoliaceae

- Lonicera japonica* Thunb. EPPC-CI

Caricaceae

- Carica papaya* L.

Caryophyllaceae

- Stellaria media* (L.) Cyrillo

Casuarinaceae

- Casuarina cunninghamiana* Miq. EPPC-CII
Casuarina equisetifolia L. ex J.R. Forst. & G. Forst. EPPC-CI
Casuarina glauca Sieb. ex Spreng. EPPC-CI

Appendix II (continued)

Ceratophyllaceae

Ceratophyllum muricatum Cham.

Chenopodiaceae

Chenopodium ambrosioides L.
Salsola kali L.

Combretaceae

Quisqualis indica L.

Commelinaceae

Murdannia nudiflora (L.) Brenan
Tradescantia zebrina Bosse.

Convolvulaceae

Ipomoea cairica (L.) Sweet
Ipomoea hederacea Jacq.
Ipomoea purpurea (L.) Roth.
Merremia dissecta (Jacq.) Hall. f.

Crassulaceae

Kalanchoe daigremontiana Ham. & Perr.
Kalanchoe fedtschenkoi Ham. & Perr.
Kalanchoe pinnata (Lam.) Pers.
Kalonche tubiflora (Harv.) Ham.

Cucurbitaceae

Citrullus lanatus (Thunb.) Mats. & Nakai.
Momordica charantia L.

Cyperaceae

Bulbostylis barbata (Rottb.) Clarke
Cyperus esculentus L.
Kyllinga brevifolia Rottb.

Dioscoreaceae

Dioscorea bulbifera L. EPPC-CI

Ebenaceae

Diospyros kaki L. f.

Appendix II (continued)

Euphorbiaceae

- Jatropha curcas* L.
Phyllanthus tenellus Roxb.
Ricinus communis L. EPPC-CII
Sapium sebiferum (L.) Roxb. EPPC-CI

Fabaceae

- Abrus precatorius* L. EPPC-CI
Albizia julibrissin Durazz. EPPC-CI
Albizia lebbeck (L.) Benth. EPPC-CI
Alysicarpus ovalifolius (Shum. & Thonn.) J. Leonard
Bauhinia variegata L. EPPC-CI
Crotalaria lanceolata E. Mey.
Crotalaria pallida Aiton
Crotalaria retusa L.
Crotalaria spectabilis Roth
Desmodium tortuosum (Sw.) DC.
Desmodium triflorum (L.) DC.
Enterolobium contortisiliquum (Vell.) Morong
Indigofera hirsuta Harv.
Indigofera spicata Forsk.
Indigofera suffruticosa L.
Kummerowia striata (Thunb.) Schindler
Leucaena leucocephala (Lam.) de Wit. EPPC-CII
Macroptilium lathyroides (L.) Urban
Medicago lupulina L.
Melilotus alba Desr.
Melilotus indica (L.) All.
Parkinsonia aculeata L.
Senna alata (L.) Roxb.
Senna occidentalis (L.) Link
Senna pendula (Humb. & Bonpl. ex Willd.) H.S. Irwin & Barneby var. *glabrata* (Vogel)
H.S. Irwin & Barneby EPPC-CI
Sesbania punicea (Cav.) Benth. EPPC-CII
Wisteria sinensis (Sims) Sweet

Geraniaceae

- Pelargonium hortorum* Bailey

Iridaceae

- Gladiolus x gandavensis* Van Houtte

Appendix II (continued)

Juglandaceae

Carya illinoensis (Wang.) K. Koch

Lamiaceae

Hyptis mutabilis (A. Rich.) Briq.

Mentha sp.

Prunella vulgaris L.

Lauraceae

Cinnamomum camphora (L.) Nees & Eberm. EPPC-CI

Persea americana Mill.

Liliaceae

Asparagus setaceus (Kunth) Jessop

Lilium longiflorum Thunb.

Lythraceae

Lagerstroemia indica L.

Malvaceae

Hibiscus rosa-sinensis L.

Hibiscus rosa-sinensis L. var. *schizopetalus* Dyer.

Hibiscus tiliaceus L. EPPC-CII

Malvastrum coromandelianum (L.) Garcke

Malvaviscus arboreus Cav. var. *drummondii* Schery.

Sida cordifolia L.

Meliaceae

Melia azedarach L.

Moraceae

Broussonetia papyrifera (L.) Vent. EPPC-CII

Ficus carica L.

Ficus elastica Roxb.

Maclura pomifera (Raf.) Schneid.

Morus alba L.

Musaceae

Musa x paradisiaca L.

Appendix II (continued)

Myrtaceae

- Eucalyptus robusta* Smith
Eugenia uniflora Smith EPPC-CI
Melaleuca quinquenervia (Cav.) Blake EPPC-CI
Psidium cattleianum Sabine EPPC-CI
Psidium guajava L. EPPC-CI
Syzygium cumini (L.) Skeels EPPC-CI
Syzygium jambos (L.) Alston EPPC-CII

Nyctaginaceae

- Bougainvillea glabra* Choisy
Mirabilis jalapa L.

Oleaceae

- Jasminum sambac* Ait. EPPC-CII
Ligustrum japonicum Thunb. EPPC-CI
Olea europaea L.

Onagraceae

- Ludwigia peruviana* (L.) Hara

Orchidaceae

- Zeuxine strateumatica* (L.) Schltr.

Phytolaccaceae

- Agdestis clematidea* Moc. & Sesse.

Plantaginaceae

- Plantago lanceolata* L.

Plumbaginaceae

- Plumbago auriculata* Lam.

Poaceae

- Arundo donax* L.
Bambusa multiplex (Lour.) Raeusch
Bambusa vulgaris Schrad. ex J.C. Wendl.
Cynodon dactylon (L.) Pers.
Dactyloctenium aegyptium (L.) Beauv.
Echinochloa colonum (L.) Link
Echinochloa crusgalli (L.) Beauv.
Eleusine indica (L.) Gaertn.
Eragrostis ciliaris (L.) R. Br.
Eremochloa ophiuroides (Munro) Hack.

Appendix II (continued)

Poaceae

- Imperata cylindrica* (L.) Beauv. EPPC-CI
Panicum maximum Jacq.
Panicum repens L. EPPC-CI
Paspalum notatum Fluegge var. *saurae* Parodi
Paspalum urvillei Steud.
Pennisetum purpureum Schum. EPPC-CI
Polypogon monspeliensis (L.) Desf.
Rhynchelytrum repens (Willd.) C.E. Hubb. EPPC-CII
Sorghum bicolor (L.) Moench
Sorghum halepense (L.) Pers.
Sporobolus indicus (L.) R. Br.
Urochloa fasciculata (Sw.) R.D. Webster
Urochloa mutica (Forssk.) R.D. Webster EPPC-CI
Urochloa subquadripara (Trin.) R.D. Webster
Zea mays L.
Zoysia matrella (L.) Merr. var. *tenuifolia* (Willd. ex Thiele) Sasaki

Polemoniaceae

- Phlox drummondii* Hook.

Polygonaceae

- Antigonon leptopus* Hook. & Arn. EPPC-CII
Polygonum persicaria L.
Rumex pulcher L.

Pontederiaceae

- Eichhornia crassipes* (Mart.) Solms EPPC-CI

Proteaceae

- Grevillea robusta* A. Cunn.

Rosaceae

- Eriobotrya japonica* Lindl.
Prunus persica (L.) Batsch
Pyrus communis L.

Rubiaceae

- Hedyotis corymbosa* (L.) Lam.
Richardia brasiliensis (Moq.) Gomez
Spermacoce verticillata L.

Appendic II (continued)

Rutaceae

- Citrus aurantium* L.
Citrus reticulata Blanco
Citrus sinensis (L.) Osbeck
Citrus x paradisi Macf.

Salicaceae

- Salix babylonica* L.

Sapindaceae

- Koelreuteria elegans* (Seemann) A.C. Sm.
Litchi chinensis Sonn.

Scrophulariaceae

- Russelia equisetiformis* Schlecht. & Cham.

Solanaceae

- Cestrum nocturnum* L.
Solanum seaforthianum Andr.

Sterculiaceae

- Dombeya wallichii* D. Jackson

Verbenaceae

- Clerodendrum indicum* (L.) Kuntze
Clerodendrum speciosum D'Ombrain
Lantana camara L. EPPC-CI
Lantana montevidensis (Spreng.) Briq.
Vitex trifolia L.

Xyridaceae

- Xyris jupicai* Rich.

Zingiberaceae

- Alpinia zerumbet* (Pers.) B.L. Burtt & R.M. Sm.

Zygophyllaceae

- Tribulus cistoides* L.
Tribulus terrestris L.

Appendix III. Plants endemic or nearly endemic to Florida occurring in the Kennedy Space Center area flora.

Gymnosperms

Pinaceae

Pinus clausa (Chapm. ex Engelm.) Vasey ex Sarg.
Pinus elliottii Engelm. var. *densa* Little & Dorman

Angiosperms

Amaryllidaceae

Hymenocallis palmeri S. Wats.

Annonaceae

Asimina obovata (Willd.) Nash
Asimina reticulata Chapm.

Asclepiadaceae

Asclepias curtissii A. Gray

Asteraceae

Arnoglossum floridana (A. Gray) H. Rob.
Berlandiera subacaulis (Nutt.) Nutt.
Chrysopsis subulata Small
Coreopsis leavenworthii T. & G.
Eupatorium mikanioides Chapm.
Helianthus debilis Nutt.
Hieracium megacephalum Nash
Liatris tenuifolia Nutt. var. *quadrifolia* Chapm.
Palafoxia feayi A. Gray
Palafoxia integrifolia (Nutt.) T. & G.
Phoebanthus grandiflora (T. & G.) Blake
Pluchea longifolia Nash
Solidago odora Ait. var. *chapmanii* (A. Gray) Cronq.

Brassicaceae

Rorippa floridana Al-Shehbaz & Rollins

Bromeliaceae

Tillandsia simulata Small

Cactaceae

Harrisa simpsonii Small ex Britton & Rose

Appendix III (continued)

Campanulaceae

Campanula floridana S. Wats.
Lobelia feayana A. Gray

Cistaceae

Helianthemum nashii Britt.
Lechea cernua Small
Lechea divaricata Shuttlew. ex Britton

Commelinaceae

Cuthbertia ornata Small

Cyperaceae

Rhynchospora intermedia (Chapm.) Britt.

Eupobiaceae

Chamaesyce cumulicola Small

Fabaceae

Rhynchosia cinerea Nash
Tephrosia angustissima Shuttlew. ex Chapm. var. *curtissii* (Small ex Rydb.) Isely
Vicia floridana S. Wats.

Juglandaceae

Carya floridana Sarg.

Lamiaceae

Conradina grandiflora Small
Piloblephis rigida (Batr. ex Benth.) Raf.

Lauraceae

Persea borbonia (L.) Spreng. var. *humilis* (Nash) Koop

Poaceae

Andropogon brachystachyus Chapm.
Andropogon floridanus Scribn.
Andropogon longiberbis Hack.
Aristida patula Chapm. ex Nash
Calamovilfa curtissii (Vasey) Scribn.
Dicanthelium ensifolium (Bald. ex Ell.) Gould var. *breve* (Hitchc. & Chase) Hansen & Wunderlin

Appendix III (continued)

Polygalaceae

Polygala rugelii Shuttlew.

Polygonaceae

Polygonella ciliata Meisn.

Ranunculaceae

Clematis baldwinii T. & G.

Scrophulariaceae

Micranthemum glomeratum (Chapm.) Shinners

Verbenaceae

Glandularia maritima (Small) Small

Glandularia tampensis (Nash) Small

Appendix IV. Bryophytes of the Kennedy Space Center area (Whittier and Miller 1975).

Musci

Amblystegium serpens (Hedw.) B.S.G. var. *juratzkanum* (Schimp.) Ren. & Card.
Amblystegium varium (Hedw.) Lindb.
Anomodon rostratus (Hedw.) Schimp.
Barbula cruegeri Sond. ex C. Muell.
Brachmenium ?systylium (C. Meull.) Jaeg. & Sauerb.
Bryum argenteum Hedw.
Bryum ?capillare Hedw.
Desmatodon sprengeli (Schw.) Williams
Entodon macropodus (Hedw.) C. Meull.
Fissidens garberi Lesq. & James
Forsstroemia trichomitria (Hedw.) Lindb.
Haplocladium microphyllum (Hedw.) Broth.
Isopterygium micans (Sw.) Broth.
Leptodictyum riparium (Hedw.) Warnst ssp. *sipho* (P. Beauv.) Grout.
Leucobryum albidum (P. Beauv.) Lindb.
Octoblepharum albidum Hedw.
Oxyrrhynchium hians (Hedw.) Loesk.
Papillaria nigrescens (Hedw.) Jaeg. & Sauerb.
Rhynchosstegium serrulatum (Hedw.) Jaeg.
Sematophyllum adanatum (Michx.) E.G. Britt.
Sphagnum strictum Sull.
Syrrhopodon texanus Sull.
Thuidium recognitum (Hedw.) Lindb. var. *delicatulum* (Hedw.) Warnst

Hepaticae and Anthocerotae

Anthoceros carolinianus Michx.
Cololejeunea cardiocarpa (Mont.) Steph.
Frullania kunzei (Lehm. & Lindenb.) Lehm. & Lindenb.
Frullania squarrosa (R.B.N.) Nees
Lejeunea cf. cladogyna Evans
Lejeunea flava (Sw.) Evans
Lejeunea floridana Evans
Lejeunea laetevirens Nees & Mont.
Lejeunea minutiloba Evans
Lophocolea martiana Nees
Microlejeunea ulicina (Tayl.) Evans ssp. *bullata* (Tayl.) Schust.
Odontoschisma denudatum (Nees) Dum.
Odontoschisma prostratum (Sw.) Trev.
Pallavicinia lyelli (Hook.) S.F. Gray
Radula australis Aust.
Radula obconica Sull.

Appendix IV (continued)

Hepaticae and Anthocerotae

Rectolejeunea maxonii Evans
Riccardia multifida (L.) S.F. Gray
Riccia aff. fluitans L.
Telaranea nematodes (Aust.) Howe

JOURNAL OF PLANT TAXONOMY AND SYSTEMATICS

The vascular flora of the Kennedy Space Center (KSC) area was first studied in the 1970's (Sweet 1976, Poppleton et al. 1977), and the list was revised in 1990 (Schmalzer and Hinkle 1990). Nomenclatural and taxonomic changes as well as additional collections required a revision of this list. The revised list includes 1024 taxa of which 803 are native and 221 are introduced. This appears to be a substantial proportion of the regional flora. Fifty taxa are endemic or nearly endemic, a level of endemism that appears high for the east coast of Florida. Of the 221 introduced plants, twenty-six are Category I invasive exotics and fifteen are Category II invasive exotics. Thirty-eight taxa are listed as threatened, endangered, or of special concern on state lists. For some of these taxa, populations on KSC appear to be important for their regional and global survival. The bryophyte flora of the KSC area includes 23 mosses and 20 liverworts and hornworts (Whittier and Miller 1976). The lichen flora is currently unknown.

Flora, Florida, Kennedy Space Center, Threatened and Endangered
